Screens, design tokens and build notes for dark and light mode

no lakaz, my home

Project	MoLakaz, Meta Global AI Developer Hackathon (Startup track)
For	Ali, and Claude Code working in the MoLakaz repo
Version	2 November 2026
App	mobile/ (Expo SDK 58, expo-router), backend on Modal

Contents

1. How to use this document with Claude Code
2. App map and navigation
3. Design tokens (colours, type, spacing) for both modes
4. Shared components
5. Screens 1–12, each with dark and light screenshots and a full spec
6. Open items to decide before or during the build

1. How to use this document with Claude Code

Put this PDF in the repo (for example `docs/MoLakaz_UI_Handoff.pdf`), open Claude Code in the repo root and paste the prompt below. The screenshots show the target look; the text under each screen is the source of truth for content, sizes and behaviour. Colours in screenshots and text match the tokens in section 3 exactly.

```
Read MoLakaz_UI_Handoff.pdf in full. It is the design spec for the MoLakaz mobile app.

Implement the UI in the existing Expo app in mobile/ (expo-router), in both dark and light mode:
1. Create theme.ts from section 3 and a ThemeProvider that follows the phone's appearance
   (useColorScheme), with a System / Light / Dark override in Home > Settings.
   No hard-coded colours in screens; everything comes from the theme.
2. Load Poppins (400, 500, 600) and Mrs Saint Delafield with @expo-google-fonts.
3. Build the shared components in section 4 first, then the 12 screens in section 5,
   matching the screenshots and the "Elements, top to bottom" lists.
4. Keep the existing API calls in the app. Where a screen needs data the backend does not
   provide yet, use a typed mock in one place (mocks.ts) and leave a TODO naming the endpoint.
5. Hide all scroll indicators. Keep touch targets at least 44x44. Respect reduced motion.
Work screen by screen and show me each one before moving on.
```

Design rules that apply everywhere. Both modes share the same layout and content; only colours change, plus two deliberate differences: the tab bar style and the Today hero card (see sections 4 and 5). Each person has their own colour wherever they appear. Green always means done, purple always means the AI (Muse Spark), amber means in progress or needs attention. No visible scrollbars anywhere.

2. App map and navigation

Routes are suggestions; adapt them to the existing expo-router structure in `mobile/`.

#	Screen	Route	Reached from
1	Welcome	`(onboarding)/welcome`	First launch
2	Describe your home (optional)	`(onboarding)/describe`	Welcome › Create a household
3	Review household	`(onboarding)/review`	Describe (Build or Skip); Home › People/Chores
4	Join with a code	`(onboarding)/join`	Welcome › Join
5	Today	`(tabs)/today`	Tab bar (default tab)
6	Week & fairness	`(tabs)/week`	Tab bar; Today › See week
7	Assistant	`(tabs)/assistant`	Tab bar; Today ask bar; Busy today?
8	Voice recording	`voice/index` (modal)	Any mic button
9	Check your message	`voice/confirm`	Voice recording › stop

10	Home	`(tabs)/home`	Tab bar
11	After photo	`chore/[id]/photo`	Today › Take the after photo
12	Photo check result	`chore/[id]/result`	After photo › shutter

Main flows

Admin setup:

Welcome → Describe your home → Review household → Today

Admin setup, skipping the description:

Welcome → Describe › Skip for now → Review household (empty, add by hand) → Today

Family member joining:

Welcome → Join with a code → Pick who you are → Today

Doing a chore:

Today › Start (before photo) → In progress → Take the after photo → Photo check result → Today

Speaking to the assistant:

Mic button → Voice recording → Check your message (edit) → Send → Assistant reply + Undo

3. Design tokens

Core colours

Token	Dark	Light	Used for
`background`	#111111	#F2F3F6	Screen background
`surface`	#1C1C1C	#FFFFFF	Cards, inputs, bubbles. Light cards add shadow 0 6px 20px rgba(14,30,58,0.06)
`surfaceSubtle`	#171717	#F7F8FA	Done chore card, action summary
`surfaceRaised`	#2A2A2A	#EEF2F8	Icon buttons, bar tracks, thumbnails
`tabBar`	#151515	#FFFFFF	Bottom navigation
`border`	rgba(255,255,255,0.06–0.08)	rgba(14,30,58,0.06–0.08)	Dividers, card edges
`borderStrong`	rgba(255,255,255,0.14–0.16)	rgba(14,30,58,0.14–0.16)	Outline buttons
`text`	#F5F2EE	#0E1E3A	Primary text
`textSecondary`	#D8D3CC	#3A4659	Body text on cards
`textMuted`	#A3A09B	#5F6B7E	Captions, helper text, inactive tabs
`textFaint`	#8C8984	#6B7688	Tertiary text, unfinished transcript words
`primary`	#F5A66E (peach)	#0E1E3A (navy)	Main buttons, active tab, links, selected day
`onPrimary`	#1A120B	#FFFFFF	Text/icons on primary
`highlight`	#F2EDE6 (cream)	#0E1E3A (navy)	Welcome button, my chat bubbles, selected chip, ask bar
`onHighlight`	#161412	#FFFFFF	Text on highlight
`panel`	#1C1C1C	#DCE7F7	Fairness card
`heroCard`	#1C1C1C (normal card)	#0E1E3A with white text	Current chore card on Today

Semantic colours (strong = fills, bars, borders; tint = soft backgrounds; ink = text and icons on the tint)

Role	Dark			Light		
	strong	**tint**	**ink**	**strong**	**tint**	**ink**
Success / done (green)	#2FD39E	#15332A	#8EEBC9	#1FB585	#DDF6EC	#047857
AI / Muse Spark (purple)	#A88BFF	#2A2142	#CDBDFF	#8E6CF0	#EEE8FF	#6D28D9
Attention / in progress (amber)	#F5B041	#3A2E16	#FFD58A	#F5A623 (badge #FFC145)	#FFF1D6	#B45309
Info (blue)	#5B8CFF	#1A2540	#A9C2FF	#3D7BF0	#E1EBFF	#1D4ED8

Coral	#FF8A6B	#3A211B	#FFB39E	#FF7A59	#FFE6DE	#C2410C

People colours

Members get colours in order from `coral, amber, blue, purple` (Mum, Dad, Ali, Zara in the samples), then the order repeats. Use the strong colour for bars and selected borders, the tint for avatar tiles, the ink for initials and names. The fourth colour is the same purple as the AI colour; if that is confusing in testing, swap the fourth person colour for green or a fifth colour.

Typography

Style	Font	Size / weight	Used for
Display	Poppins	30–40 / 500–600	Welcome headline, fairness score
Title	Poppins	26 / 600 (onboarding), 22 / 600 (tabs)	Screen titles
Section	Poppins	16 / 600	"Your chores today", "People"
Body	Poppins	14–15 / 400–500, line-height 1.5–1.6	Card text, chat
Caption	Poppins	12–13 / 400–500	Meta lines, helper text
Small label	Poppins	11 / 500–600	Badges, tab labels
Transcript	Poppins	28 / 500 (live), 18 / 500 (edit)	Voice screens
Script accent	Mrs Saint Delafield	34–38 / 400	Welcome and Describe only, decorative

Shape and spacing

Screen padding 24 horizontal, 20–32 top; tab screens leave 100 at the bottom for the tab bar. Card radius 22 (small cards 18–20), buttons 56 tall with radius 28, chips 36–40 tall and fully rounded, avatar/icon tiles 34–44 with radius 12–14. Gaps: 8 between chips, 10–12 between cards, 22 before a section header. Light-mode cards use a soft shadow; dark-mode cards use no shadow.

```ts
// theme.ts — single source of truth for both modes
export const palette = {
  dark: {
    background: '#111111', surface: '#1C1C1C', surfaceSubtle: '#171717',
    surfaceRaised: '#2A2A2A', tabBar: '#151515', panel: '#1C1C1C',
    border: 'rgba(255,255,255,0.07)', borderStrong: 'rgba(255,255,255,0.15)',
    text: '#F5F2EE', textSecondary: '#D8D3CC', textMuted: '#A3A09B', textFaint: '#8C8984',
    primary: '#F5A66E', onPrimary: '#1A120B',
    highlight: '#F2EDE6', onHighlight: '#161412',
    mess: '#F5A66E',
    success: { strong: '#2FD39E', tint: '#15332A', ink: '#8EEBC9' },
    ai:      { strong: '#A88BFF', tint: '#2A2142', ink: '#CDBDFF' },
    amber:   { strong: '#F5B041', tint: '#3A2E16', ink: '#FFD58A' },
    blue:    { strong: '#5B8CFF', tint: '#1A2540', ink: '#A9C2FF' },
    coral:   { strong: '#FF8A6B', tint: '#3A211B', ink: '#FFB39E' },
  },
  light: {
    background: '#F2F3F6', surface: '#FFFFFF', surfaceSubtle: '#F7F8FA',
    surfaceRaised: '#EEF2F8', tabBar: '#FFFFFF', panel: '#DCE7F7',

export const cardShadowLight = {
  shadowColor: '#0E1E3A', shadowOpacity: 0.06, shadowRadius: 20,
  shadowOffset: { width: 0, height: 6 }, elevation: 3,
};
```

4. Shared components

Component	Spec
PrimaryButton	56 tall, radius 28, background `primary`, text `onPrimary` 15/600, optional trailing arrow or leading icon (18).
OutlineButton	44–56 tall, radius = half height, 1px `borderStrong`, transparent, text 13–14/500.
HighlightButton	Welcome only: `highlight` background, `onHighlight` text.
Card	`surface`, radius 22, padding 16–18; light mode adds `cardShadowLight`.
TintCard	Semantic tint background, no border or shadow (Muse Spark note = ai.tint, info notes = success.tint).
Chip	36–40 tall, padding 14–16, fully rounded. Selected: `primary` or `highlight` fill. Suggestion chips: semantic tint + ink.
PersonTile	34–46 square (radius 12–14) or circle; person tint background, ink initial 14–17/600; optional 2px strong ring.
Badge	Padding 4×10, radius 12, 11/600. "In progress": amber tint + ink (light: #FFC145 with navy text on the hero card).
ProgressRing	50px, 4px stroke, track `surfaceRaised`, progress `success.strong`, label "1/3" 12/600.
FairnessBars	Row per person: name in ink (12/600), 8px track, fill in person strong colour, % on the right.
Waveform	Rounded 4px bars, 4px gap, single `ai.strong` colour, opacity 0.35→1 toward the centre, animated scaleY 0.55↔1 (1.1s, staggered).
TabBar (dark)	Full width, 84 tall, background `tabBar`, 1px top border. Four items: icon (22) over label (11). Active item `primary`, others `textMuted`.
TabBar (light)	Floating pill 16 from the sides and 18 from the bottom, 64 tall, radius 32, white with shadow 0 10 30 rgba(14,30,58,0.12). Active item is a navy capsule (48 tall) with icon + label; others are icon-only 48px buttons with accessibility labels.

Icons

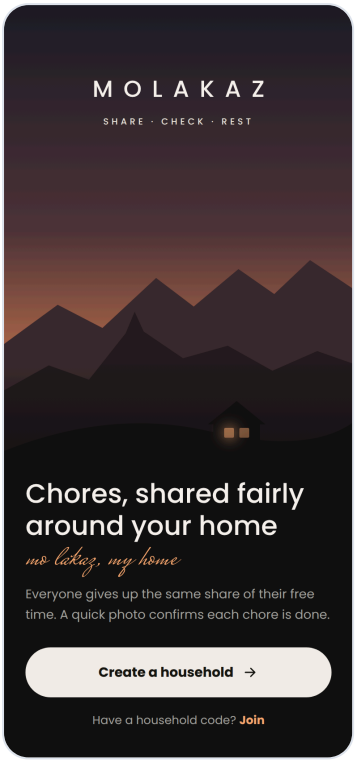

All icons are 24-grid stroke icons, 1.8–2 stroke width, round caps. `lucide-react-native` matches closely: Sun (Today), Calendar (Week), Sparkles (Assistant/AI), House (Home), Mic, Camera, Trash2, Check, Clock, X, Send, Copy, Settings, Pencil, Play, Keyboard, Zap, ChevronLeft, ArrowRight, Plus, Info.

Behaviour rules

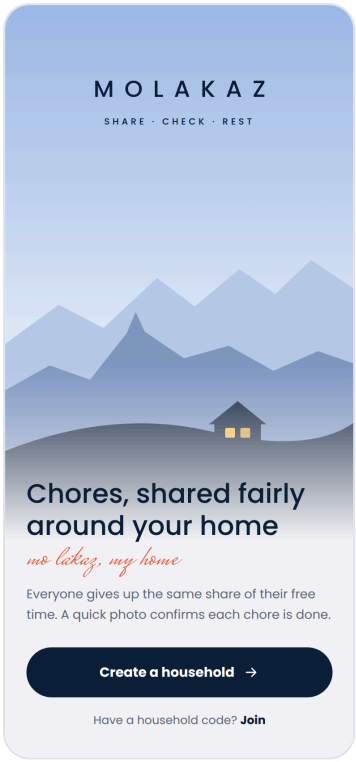

- No visible scrollbars: set `showsVerticalScrollIndicator={false}` and `showsHorizontalScrollIndicator={false}` on every ScrollView/FlatList. Horizontal chip rows still scroll.
- Touch targets at least 44×44; icon-only buttons have `accessibilityLabel`.
- Text contrast at least 4.5:1 (the token pairs above meet this).
- Animations (voice rings and bars) use Reanimated and stop when reduced motion is on.
- Theme follows the system by default; override stored on the device.

1 Welcome

Suggested route: `app/(onboarding)/welcome.tsx`

Dark

Light

Purpose

First screen for a new install. Explains the idea in one line and offers two ways in.

Elements, top to bottom

- Full-bleed illustration (top ~600px): mountains at dusk (dark) or daytime (light) with a small house whose windows are lit. Fades into the background colour at the bottom. Build with react-native-svg.
- Wordmark "MOLAKAZ" (26px, weight 500, letter-spacing 0.45em, centred) and the tagline "SHARE · CHECK · REST" (10px, letter-spacing 0.32em).
- Headline "Chores, shared fairly around your home" (30px, weight 500, two lines).
- Script line "mo lakaz, my home" in Mrs Saint Delafield, 34px (dark: primary peach; light: #E8603C).
- Body text: "Everyone gives up the same share of their free time. A quick photo confirms each chore is done." (14px, muted).
- Primary button "Create a household →" (dark: cream #F2EDE6 with dark text; light: navy with white text).
- Text line "Have a household code? Join" where "Join" is a link.

Behaviour and navigation

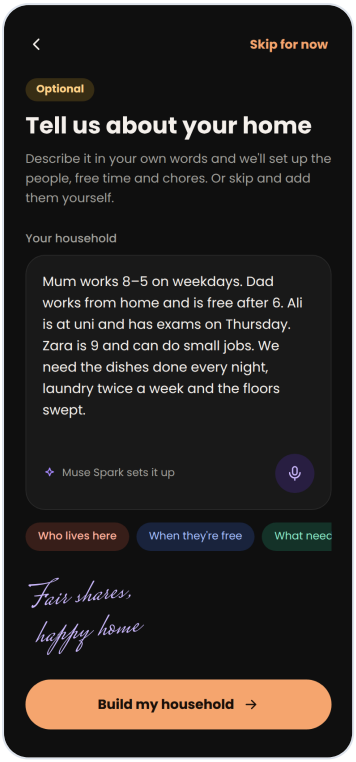

- "Create a household" → Describe your home.
- "Join" → Join with a code.

Data needed

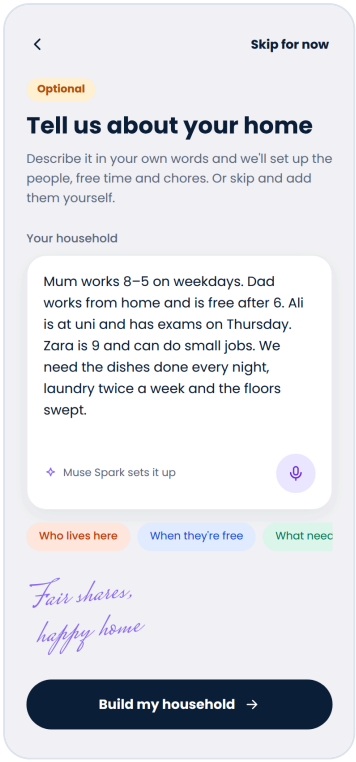

- None.

2 Describe your home (optional)

Suggested route: `app/(onboarding)/describe.tsx`

Dark

Light

Purpose

Lets the person who runs the home describe it in plain words so Muse Spark fills in people, free time, chores and photo checks. This step is optional.

Elements, top to bottom

- Header: back chevron (left) and "Skip for now" text link (right, primary colour).
- "Optional" pill (amber tint), title "Tell us about your home", helper text explaining they can skip and add things by hand.
- Label "Your household" and a large text card (multi-line TextInput, 15px, line-height 1.6) prefilled only as placeholder text in production.
- Inside the card, bottom row: "Muse Spark sets it up" with a purple sparkle icon, and a round mic button (purple tint) to dictate instead.
- Hint chips (horizontal scroll, no scrollbar): "Who lives here" (coral tint), "When they're free" (blue tint), "What needs doing" (green tint). Tapping a chip can insert a prompt into the text.
- Decorative script text "Fair shares, happy home", rotated -6°.
- Primary button "Build my household →".

Behaviour and navigation

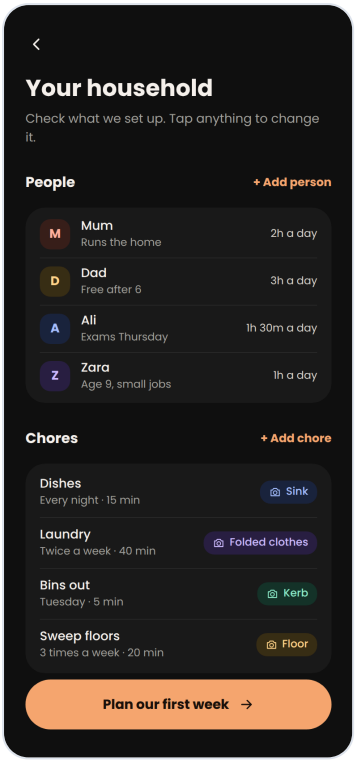

- "Skip for now" → Review household with empty People and Chores lists.
- "Build my household" → send the text to the backend setup endpoint (Muse Spark parses it), show a loading state, then go to Review household with the parsed result.
- Mic button → Voice recording screen in "dictation" mode; the confirmed transcript is inserted into the text card instead of being sent to the assistant.

Data needed

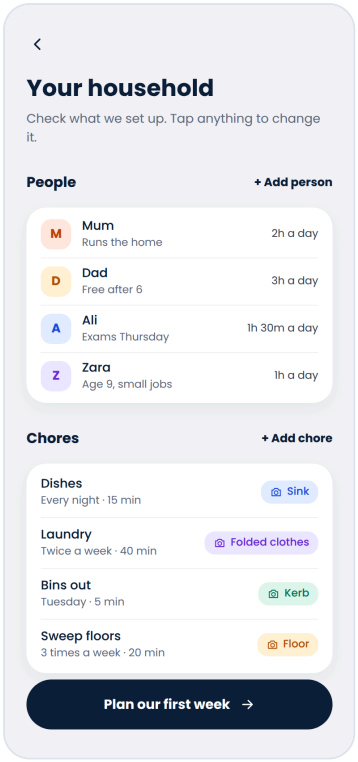

- Backend: the existing "plain-English household description → people, free time, chores, photo checks" call described in the README.

3 Review household

Suggested route: `app/(onboarding)/review.tsx`

Dark

Light

Purpose

Shows what was set up (or an empty list after skipping) so the admin can check and edit before the first week is planned.

Elements, top to bottom

- Back chevron, title "Your household", helper "Check what we set up. Tap anything to change it."
- Section header "People" with "+ Add person" link on the right.
- People card: one row per member (52px): colour tile with initial (person colour tint + ink), name, a short role line (e.g. "Free after 6", "Age 9, small jobs"), free time on the right ("2h a day").
- Section header "Chores" with "+ Add chore" link.
- Chores card: one row per chore (56px): name, "frequency · minutes", and a tinted pill with a camera icon naming what to photograph ("Sink").
- Primary button "Plan our first week →".

Behaviour and navigation

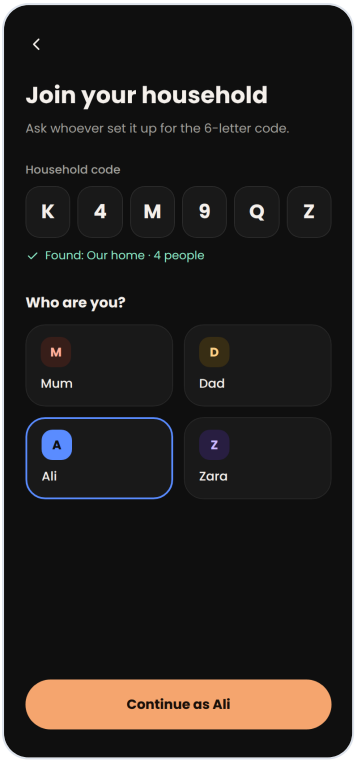

- Tapping a row opens an edit sheet (name, free time per day, age; or chore name, frequency, minutes, effort, photo check mode/look_for/spot).
- "Plan our first week" → save household, run the planner, then go to Today.
- If both lists are empty, disable the button and show "Add at least one person and one chore".

Data needed

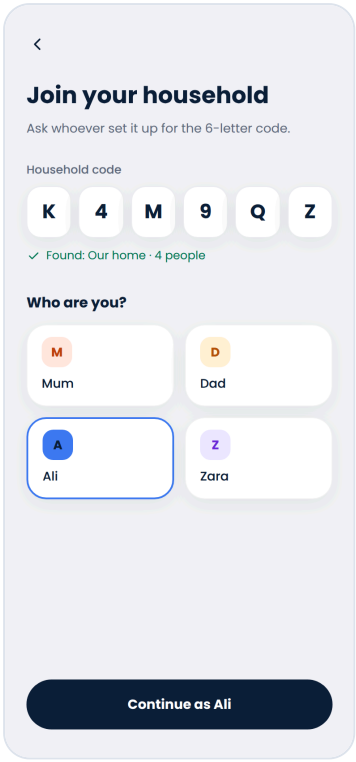

- Household: people (name, free minutes per day, age, dislikes), chores (name, frequency, minutes, effort, photo check JSON as in the README).

4 Join with a code

Suggested route: `app/(onboarding)/join.tsx`

Dark

Light

Purpose

For other family members: enter the 6-letter household code, then pick who you are.

Elements, top to bottom

- Back chevron, title "Join your household", helper text.
- Six code boxes (56px tall) driven by one hidden TextInput (autoCapitalize characters, maxLength 6).
- Green confirmation line once found: "Found: Our home · 4 people".
- "Who are you?" grid, 2 columns, 92px cards: colour tile with initial and the name. Selected card gets a 2px border in that person's strong colour and a filled tile.
- Primary button "Continue as {name}".

Behaviour and navigation

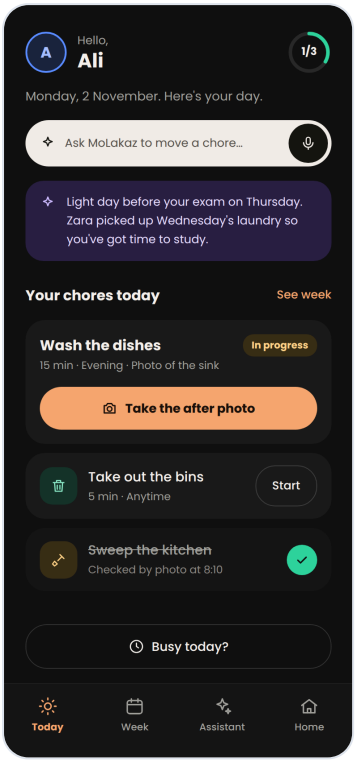

- Look up the code as soon as 6 characters are typed; show an inline error if not found.
- Selecting a person stores the member id on the device (no real accounts yet, per README), then → Today.

Data needed

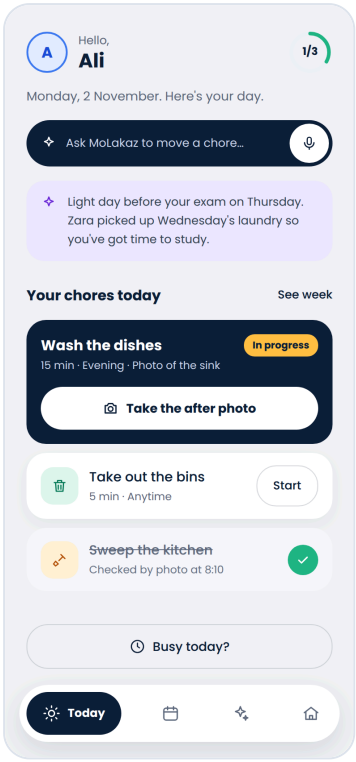

- Household lookup by join code; members list.

5 Today (tab)

Suggested route: `app/(tabs)/today.tsx`

Dark

Light

Purpose

Home screen for every member. Deliberately sparse: only my chores for today.

Elements, top to bottom

- Header row: my avatar (46px circle, person tint + 2px strong-colour ring), "Hello," and my name; a progress ring on the right (green, "1/3").
- Date line "Monday, 2 November. Here's your day."
- Ask bar (52px pill; dark: cream, light: navy): sparkle icon + "Ask MoLakaz to move a chore…" (opens Assistant) and a round mic button on the right (opens Voice recording).
- Muse Spark note card (purple tint): today's personal note from the planner.
- Section header "Your chores today" with "See week" link.
- Current chore card: name, "minutes · time of day · what to photograph", amber "In progress" badge, primary button "Take the after photo" (camera icon). In light mode this card is the navy hero card with a white button.
- Other chore cards: coloured icon tile, name, minutes; a "Start" outline button. Done chores: muted, struck through, "Checked by photo at 8:10", green check circle.
- Bottom outline button "Busy today?" with clock icon.
- Tab bar (see Components).

Behaviour and navigation

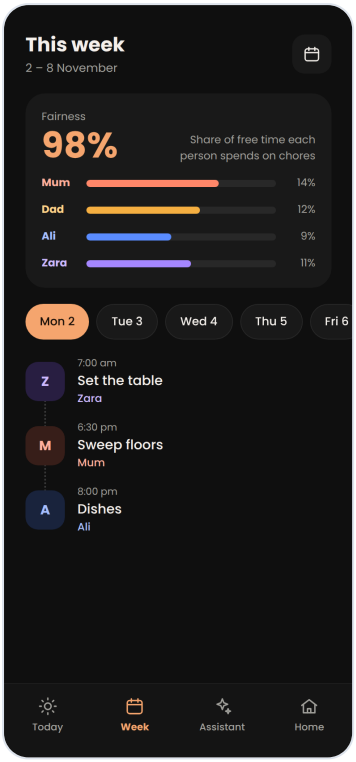

- A chore moves: To do → "Start" takes the before photo → In progress → "Take the after photo" → Photo check → Done (or admin approval).
- "Busy today?" → confirmation sheet, then call the rebalance endpoint that moves my chores for today to whoever is free; show what moved with an Undo.
- Long-press or a menu on a chore → "Can't do it today" (single hand-off).

Data needed

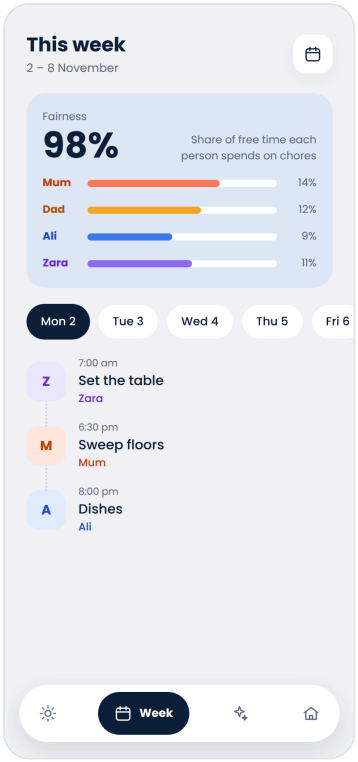

- My chores for today with status, the per-person Muse Spark note, done count.

6 Week & fairness (tab)

Suggested route: `app/(tabs)/week.tsx`

Dark

Light

Purpose

Shows the whole household's week and makes the fairness idea visible.

Elements, top to bottom

- Title "This week", date range, and a calendar icon button (pick another week).
- Fairness card (dark: surface; light: pale blue #DCE7F7): "Fairness" label, big score (40px, e.g. 98%), explainer "Share of free time each person spends on chores", then one bar per person in their strong colour with the percentage on the right.
- Day pills (horizontal scroll, no scrollbar): "Mon 2" … "Sun 8"; selected pill is filled with the primary colour.
- Timeline for the selected day: dotted vertical line; each entry has a 44px person tile (tint + initial), time, chore name, and the person's name in their ink colour.

Behaviour and navigation

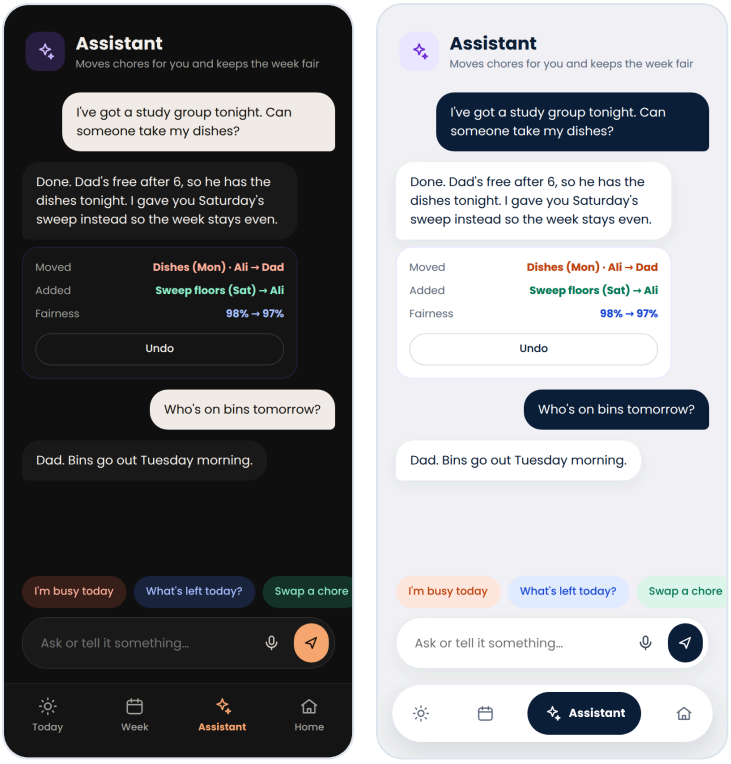

- Tapping a day pill switches the timeline.
- Tapping a timeline entry opens the chore detail sheet.

Data needed

- Week plan from the planner; Jain's index score; per-person load ÷ free time.

7 Assistant (tab)

Suggested route: `app/(tabs)/assistant.tsx`

Dark Light

Purpose

Chat with the household assistant (Muse Spark with tool calls) that can move, swap and explain chores.

Elements, top to bottom

- Header: purple-tinted sparkle tile, "Assistant", subtitle "Moves chores for you and keeps the week fair".
- Messages: my bubbles on the right (dark: cream with dark text; light: navy with white text, radius 20/20/6/20); assistant bubbles on the left (surface colour, radius 20/20/20/6).
- Action summary card under an assistant reply that changed something: rows "Moved", "Added", "Fairness 98% → 97%" (coral / green / blue values) and an "Undo" outline button.
- Suggestion chips (horizontal scroll): "I'm busy today", "What's left today?", "Swap a chore", "Add a note", each a different soft tint.
- Input bar: text field "Ask or tell it something…", mic button (opens Voice recording), round primary send button.

Behaviour and navigation

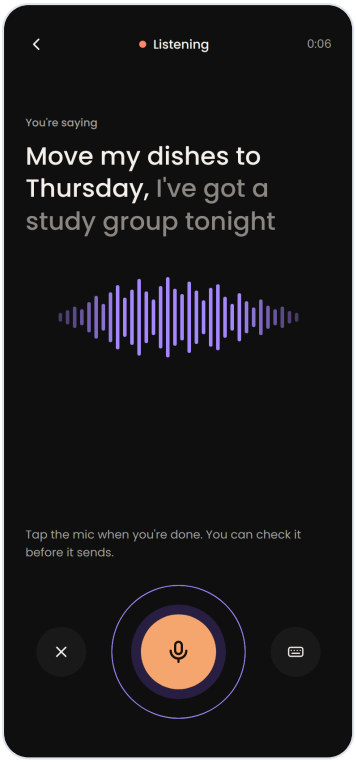

- Send → POST to the assistant endpoint; show a typing indicator; render any tool-call results as the action summary card.
- Undo → revert the last change set.

Data needed

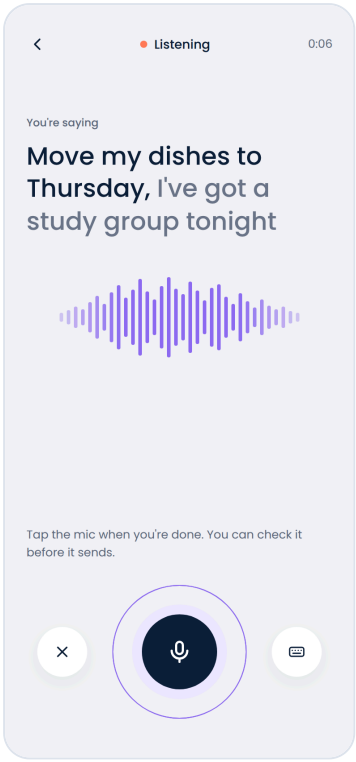

- Chat history for this member; the assistant endpoint (not in the backend yet, see Open items).

8 Voice recording

Suggested route: `app/voice/index.tsx (modal)`

Dark

Light

Purpose

Full-screen listening state when the user speaks to the assistant (or dictates the household description).

Elements, top to bottom

- Header: back chevron, "Listening" with a small coral dot, and the elapsed time ("0:06").
- "You're saying" label, then the live transcript in large text (28px, weight 500). Words not yet final are shown in the faint text colour.
- Waveform: about 34 rounded bars, single purple colour (dark #A88BFF, light #8E6CF0), opacity fading toward the edges, animated with Reanimated (respect reduced motion).
- Hint "Tap the mic when you're done. You can check it before it sends."
- Controls: cancel (56px round, X), big mic button (84px, primary colour) inside two pulsing purple rings and a purple-tint halo, and a keyboard button (switch to typing).

Behaviour and navigation

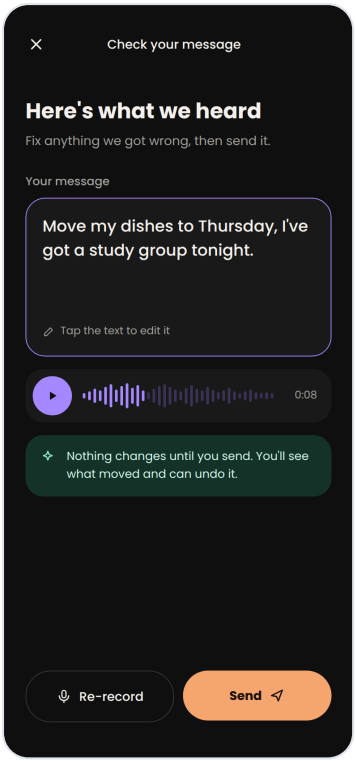

- Mic tap → stop recording → Check your message.
- Cancel → back without sending.
- Keyboard → back to Assistant with the text field focused.

Data needed

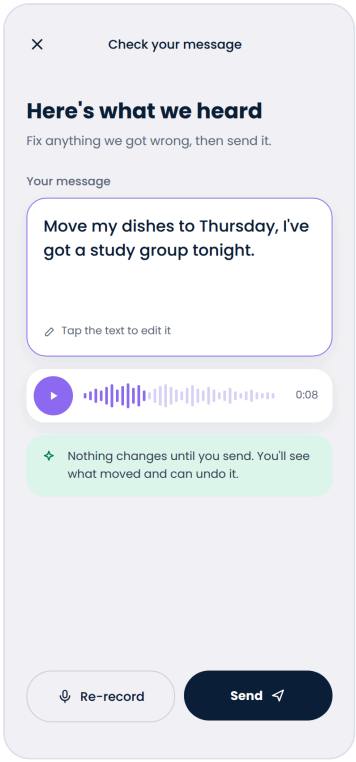

- Microphone permission; speech-to-text (see Open items).

9 Check your message

Suggested route: `app/voice/confirm.tsx`

Dark

Light

Purpose

After recording, the transcript is shown so the user can confirm or edit it before anything happens.

Elements, top to bottom

- Header: close (X) and "Check your message".
- Title "Here's what we heard", helper "Fix anything we got wrong, then send it."
- Editable message card (multi-line TextInput, 18px, purple 1.5px border) with a pencil hint "Tap the text to edit it".
- Playback row: purple play button, mini waveform (played part purple, rest muted), duration.
- Green info card: "Nothing changes until you send. You'll see what moved and can undo it."
- Two buttons side by side: "Re-record" (outline, mic icon) and "Send" (primary, send icon).

Behaviour and navigation

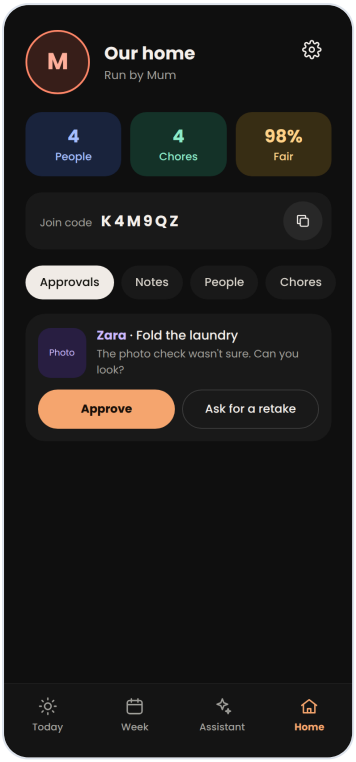

- Send → submit the edited text exactly like a typed message, then return to Assistant.
- Re-record → back to Voice recording, discarding this transcript.
- In dictation mode (from Describe), "Send" becomes "Use this text" and returns the text to Describe.

Data needed

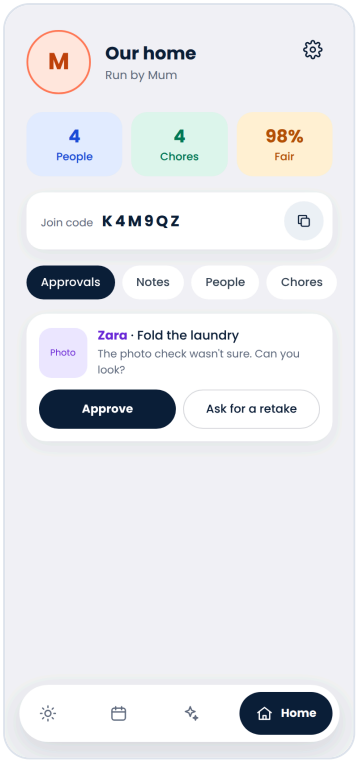

- Transcript text and the audio file for playback.

10 Home (tab)

Suggested route: `app/(tabs)/home.tsx`

Dark

Light

Purpose

Household management. Everyone can view it; only the admin can edit.

Elements, top to bottom

- Profile header: 72px avatar (admin's person colour), "Our home", "Run by Mum", settings gear (top right).
- Three stat tiles in a row: People (blue tint), Chores (green tint), Fair % (amber tint).
- Join code card: label, code with letter spacing, copy button.
- Segmented chips (horizontal scroll): Approvals, Notes, People, Chores. Selected chip uses the highlight colour.
- Approvals: card per chore the photo check could not confirm: photo thumbnail, "{Name} · {chore}" (name in person ink colour), reason, "Approve" (primary) and "Ask for a retake" (outline).
- Notes: list of notes for the planner ("Ali has exams on Thursday") and "+ Add a note".
- People / Chores: simple lists linking to the same edit sheets as Review household.

Behaviour and navigation

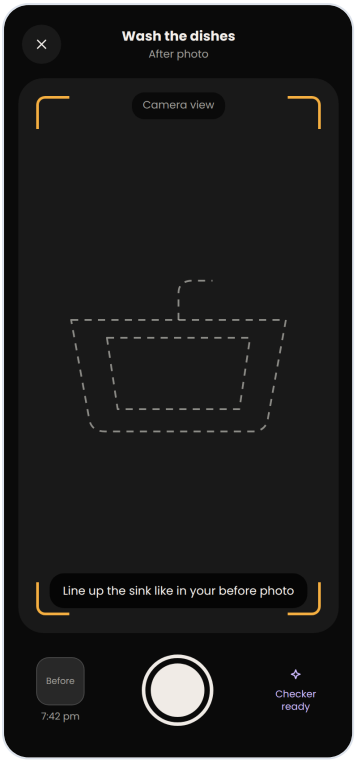

- Approve → mark the chore done. Retake → notify the member.
- Notes are sent to Muse Spark with the weekly plan.
- Settings gear → theme override (System / Light / Dark) and notification settings.

Data needed

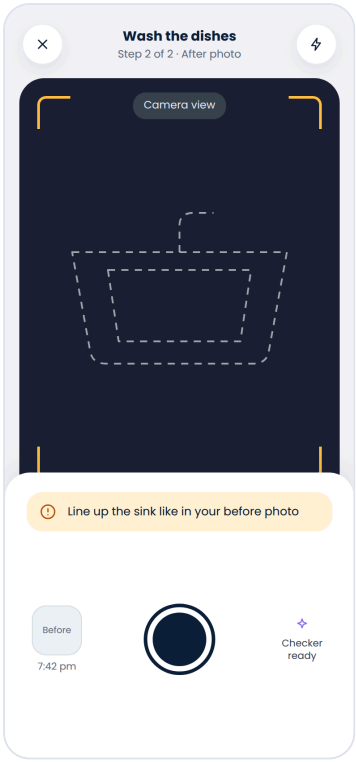

- Household, pending approvals, notes, join code.

11 After photo (camera)

Suggested route: `app/chore/[id]/photo.tsx`

Dark

Light

Purpose

Camera screen for the after photo, guiding the user to shoot the same spot as the before photo.

Elements, top to bottom

- Header: close (X), chore name and "Step 2 of 2 · After photo"; light mode also has a flash button.
- Camera view (expo-camera) in a rounded 28px frame, with amber corner guides and the before photo's outline shown as a dashed overlay (or the before photo at ~25% opacity).
- Hint "Line up the sink like in your before photo" (dark: overlay pill on the camera; light: amber banner in the white bottom sheet).
- Bottom: before-photo thumbnail with its time, the shutter button (80px), and "Checker ready" with a purple sparkle.

Behaviour and navigation

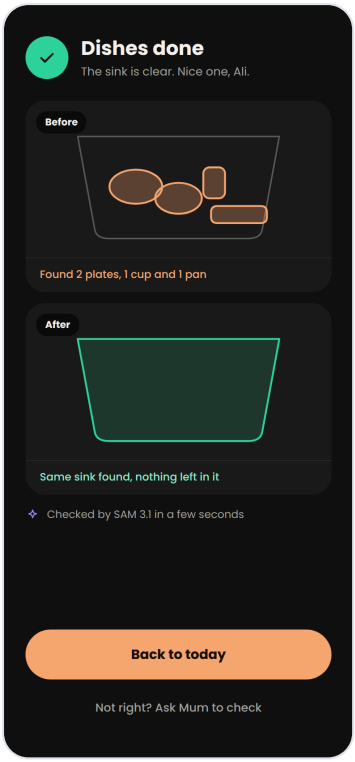

- On shutter → upload the after photo, call the verify endpoint, go to Result.
- The backend warm-up call should already have been triggered when the before photo was uploaded (README).

Data needed

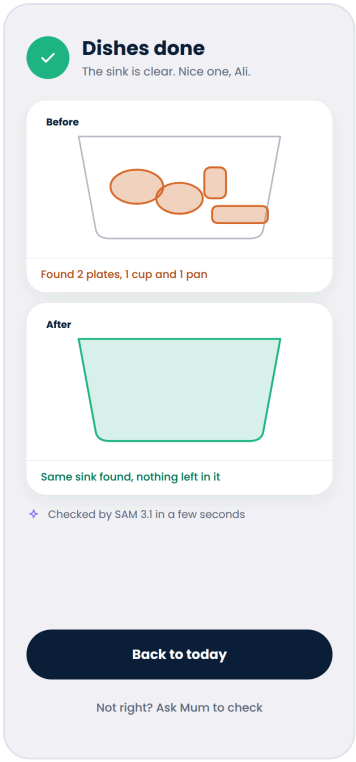

- Before photo URL and the chore's "spot".

12 Photo check result

Suggested route: `app/chore/[id]/result.tsx`

Dark

Light

Purpose

Shows what SAM 3.1 found in each photo and the verdict.

Elements, top to bottom

- Header: green check circle, "Dishes done", "The sink is clear. Nice one, Ali."
- Before card: photo with found items outlined and filled (dark: peach #F5A66E; light: orange #D9692A), "Before" label, caption "Found 2 plates, 1 cup and 1 pan" in the same colour.
- After card: photo with the spot outlined in green, caption "Same sink found, nothing left in it".
- "Checked by SAM 3.1 in a few seconds" with a purple sparkle.
- Primary button "Back to today" and a text link "Not right? Ask Mum to check".

Behaviour and navigation

- Fail states: "Some mess is still there" (show what is left, "Retake"), or "Couldn't find the sink" (ask for a retake from the same place, per README).
- "Ask … to check" → adds the chore to the admin's Approvals.

Data needed

- Verify result: masks/boxes per photo, counts, pass/fail, reason. Note: the README says the backend paints red/green; this design uses orange (mess) and green (clean) instead, which is easier for colour-blind users.

6. Open items

These are not covered by the current backend described in the README, so decide them before building the related screens.

- **Assistant chat endpoint.** The Assistant and voice screens need a chat endpoint where Muse Spark can call tools (move chore, swap, add note, explain week) and return the changes it made so the app can show the summary card and Undo.
- **Speech-to-text.** The voice screens need live transcription. Options: on-device recognition through an Expo speech-recognition module (needs a development build, not Expo Go), or recording audio and transcribing on the backend.
- **Photo overlay colours.** The README says the backend paints found items red/green. This design uses orange for mess and green for clean. Either change the colours in `backend/verify.py` or return masks/boxes and draw the overlay in the app.
- **Fourth person colour.** Purple is used for both the fourth person and the AI. Fine for the demo; revisit if it confuses testers.
- **Accounts.** Joining by code and picking your name matches the README (no real accounts), which is fine for the demo.

The interactive canvas with every screen in both modes is also available as a clickable prototype; ask Ghavish for the link if you want to tap through the flows.
